FUND DESCRIPTION

Investment Objective: The investment objective of the Horizon Expedition Plus ETF is to seek to provide total return.

The Horizon Expedition Plus ETF seeks total return by investing primarily in large-cap U.S. equity securities and selling and purchasing put and call options in an effort to generate income to the Fund. The Fund employs techniques, including strategic portfolio positioning and security selection, to seek to achieve higher overall volatility as compared to the large-cap equity market generally.

ASPECTS OF THIS ACTIVE FUND

Domestic: Combines large-cap U.S. stocks with a strategic use of option put spreads to enhance return potential.

Enhanced Equity: Designed for higher volatility exposure than traditional equity, seeking long-term returns with tactical flexibility.

Options-based: Uses options to seek more predictable return profiles while increasing market participation.

PERFORMANCE (%) as of 06/30/26

	3 MO	YTD	1 YR	*Inception
Fund Market Price Return	22.07	12.84	29.50	20.16
Fund NAV Return	21.91	13.01	29.58	20.16

FOOTNOTES

The S&P 500® Index is an unmanaged composite of 500 large capitalization companies. This index is widely used by professional investors as a performance benchmark for large-cap stocks.

You cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charge.

DISCLOSURES

The fund's investment objective, risks, charges and expenses must be considered carefully before investing. The summary and statutory prospectuses contains this and other important information about the investment company, and they may be obtained by calling 866-371-2399 or visiting www.horizonmutualfunds.com. Read them carefully before investing.

Investing involves risk, including potential loss of principal. There is no assurance that the fund will meet its objective.

The ability of the Fund to meet its investment objective is directly related to the allocation of the Fund's assets. Horizon may allocate the Fund's investments so as to under-emphasize or over-emphasize investments at the wrong times or under the wrong market conditions, in which case the Fund's value may be adversely affected.

Investments in securities in general are subject to market risks that may cause their prices to fluctuate over time, and the Fund's investments may decline in value due to factors affecting securities markets generally, or particular countries, segments, economic sectors, industries or companies within those markets. The value of a security may decline due to general economic and market conditions that are not specifically related to a particular issuer. Markets may, in response to governmental actions or intervention, economic or market developments, trade disputes, the spread of infectious illness or other public health issues, geopolitical factors or other external factors, experience periods of high volatility and reduced liquidity, and, in extreme cases, may lead to trading restrictions and halts. These and other similar events could be prolonged and could adversely affect the value and liquidity of the Fund's investments and negatively impact the Fund's performance. Equity securities typically have greater price volatility than fixed income securities. The market price of equity securities owned by the Fund may go down, sometimes rapidly or unpredictably. Equity securities may decline in value due to factors affecting equity securities markets generally, particular industries represented by those markets, or factors directly related to a specific company, such as decisions made by its management. Investments in options involve risks different from, or possibly greater than, the risks associated with investing directly in securities, including leverage risk, tracking risk and, in the case of over the counter options, counterparty default risk. Option positions may expire worthless exposing the Fund to potentially significant losses.

The value of investments in fixed income securities and securities in which the underlying investments are fixed income securities are expected to fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of the fixed income securities owned by the Fund or its underlying investments. Issuers of floating rate debt are exposed to higher interest payments in a rising rate environment. Issuers may default on interest and principal payments. Generally, securities with lower debt ratings ("junk bonds") have greater credit risk. The Fund's investment in U.S. government obligations may include securities issued or guaranteed as to principal and interest by the U.S. government, or its agencies or instrumentalities. Payment of principal and interest on U.S. government obligations may be backed by the full faith and credit of the United States or may be backed solely by the issuing or guaranteeing agency or instrumentality itself. There can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) where it is not obligated to do so. In addition, U.S. government securities are not guaranteed against price movements due to changing interest rates.

ETFs are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a premium or discount to its net asset value, an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Fund's ability to sell its shares. Shares of any ETF are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

Horizon ETFs are distributed by Quasar Distributors, LLC.
